

QUARTZITE

Azul Imperiale

Type	Quartzite
Finish	Polished
Color family	Blue
Origin	Bahia, Brazil
Sealing	Confirm requirements for the selected stone

Azul Imperiale is one of the rare blue quartzites quarried in the state of Bahia in northeastern Brazil, the same region that yields the famous Azul Macaubas. Its pastel sky-blue color comes from the aluminum-silicate mineral kyanite (roughly 5–8% of the stone), formed when a billion-plus-year-old quartz sandstone was recrystallized deep underground under heat and pressure into an exceptionally hard, scratch- and etch-resistant quartzite. The 'Azul Imperiale' name (Italian/Portuguese for 'imperial blue') reflects the regal rarity of a naturally blue stone.

CARE & INSTALLATION

Clean with warm water and a stone-safe cleaner; wipe spills promptly and use trivets. Sealing needs depend on the selected stone and its use; confirm the care schedule with us. Slab movement and tone vary from swatches. Confirm the actual slab, finish and thickness before fabrication.
